

## Midway City Water Customers

### Winter Conditions/Culinary (Drinking) Water

Water is a major function in our everyday lives. Due to excessively cold winter weather and no snow to help blanket the ground and prevent frost from penetrating deep into the ground there may be a chance for your culinary drinking water line to freeze.

#### Precautions:

- If you are planning on being away from your residence for a period of time you may want to connect a garden hose to your outside water tap. Leave your hose running with about a pencil size stream. This will allow for the water to flow and prevent your lines from freezing. Note: if you leave a house running you may want to inform your neighbors so that they don't shut the water off and cause more problems. (Do NOT leave water running in your home, this water runs into the sewer and increases the sewer billings to all of the residents.
- If you're leaving town for the season or an extended time you may winterize your home. This will allow for no water to freeze and break causing damage to your homes.
- The home owner is responsible for the waterline from the water meter to the home. If your line freezes you will be responsible for contacting a plumber.
- The city is responsible for the water line from the water main to the water meter. (Note: our water meters have a frost plate that has been designed to break allowing for water to flow out of them, they are designed this way to prevent the water service from freezing back to the water main, please contact the Midway City office at (435) 671-7387 if you see water flowing out of the meter box).
- Water meters that are located near the driveways should not be uncovered during snow removal, the snow that covers the meter box acts as an insulation blanket that will help prevent the water meter and service from freezing.

**PLEASE DO NOT SHUT THE WATER OFF YOURSELVES.**

**CERTIFIED PLUMBERS AND CONTRACTORS:** Note: more plumbers located in the yellow pages.

- Ice Excavators Allen Construction 435-671-3264
- Kim Arnold Plumbing 435-654-4062
- Coleman Plumbing 435-671-5865
