July 31, 2020

Dear Midway Resident,

In 2001, Midway City and Midway Irrigation Company joined to create a partnership where Midway Irrigation would build a system to deliver secondary water for the area. Since then, Midway Irrigation has delivered irrigation water to most City's residence.

In 2018, the Utah State Legislature passed a bill requiring secondary water delivery systems to install meters on all secondary water connections and report water use to the State Engineers office. In 2019, a subsequent bill removed the requirement for smaller communities until a later date but, because meters will be a valuable management tool, Midway Irrigation's board decided to continue to install meters on all secondary services.

Please be aware that Midway Irrigation will be installing meters in your area over the next few weeks. The process will consist of blue staking the property so paint and flag markings will be visible, excavating a spot near each connection's main valve, installing a meter and a valve box around the meter followed by replacement of material and recovered grass around the box. The sod placed around the meter box will take a few days to recover but, with irrigation and a few days, should soon look much like the grass around the site.

If you have questions, please call Mike at 801-420-6158 or Tom at 435-671-7210. You call also obtain information from Midway City by calling the City at 435-654-3223 and speak with Jennifer.

Thanks

Mike Kohler  
Manager, Midway Irrigation Co.
