(b) (6) :

This letter has been drafted in response to your communication dated October 2, 1995 concerning my property: Lot 15 in the Swiss Paradise subdivision in Midway, Utah.

(b) (6)'s recounting of our conversation is accurate. There is, however, one important point missing from her narrative concerning our communication with (b) (6) in 1992. My notes do not indicate being informed of a requirement for a formal proposal or request for authorization in order to build on this property, or I would have secured such authorization prior to construction.

We would like to resolve this issue in a reasonable and timely manner. To that end, we are supplying a copy of the site plan for our residence. Based on (b) (6)'s recommendations, the house was situated 100 feet back from the property line, beyond the suspected wetland area. Fill was placed within this area to construct a gravel driveway; fill dirt has been placed in two berms close to the street for landscaping. These raised berms provide the additional root zone depth required to maintain the viability of ten spruce and aspen trees above the shallow potrock ledge which was found in this area.

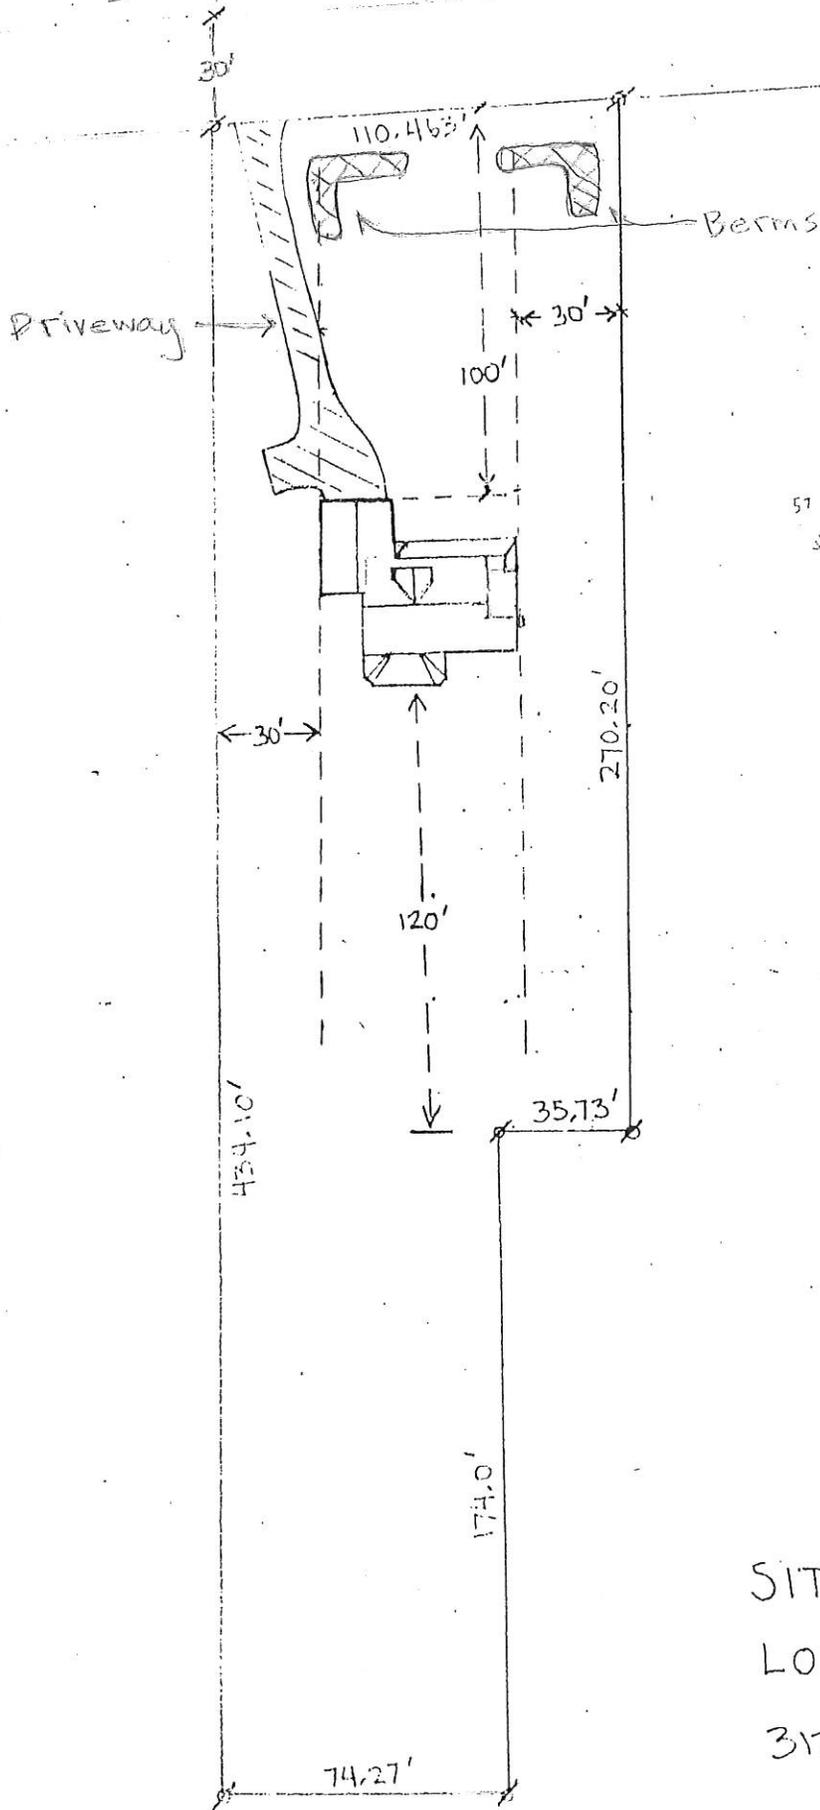

I request 1) to be kept informed of the course of this investigation, 2) to receive copies of any field data, interpretation and analysis, and 3) to be involved in the selection and placement of mitigation measures, should they be required.

Sincerely,

Mark Walsh
