## Fire-Hydrant Rental Directions

1. Open, side cap of Fire Hydrant.
2. Screw on Fire Hydrant Meter with Red-flow Control Valve, Flow Control Valve goes between Hydrant and Meter.
3. Close Meter Flow Valve Completely before opening Main flow Valve on Fire Hydrant., Open Main Fire Hydrant Valve counter clock-wise, open valve slowly too prevent water from building up pressure and damaging water system. Once Fire-Hydrant is completely open, then you may use the Red Control-Valve to open and close the hydrant to start pulling water. While the initial turn on of the hydrant, check other Fire-Hydrant Ports to verify there are no leaks. You may need to tighten other ports to make sure they are on the hydrant secure.
4. Once you are done with the fire-hydrant, close the Red Control-Valve completely, then turn the Main Fire Hydrant Valve off Completely in the Clockwise Direction. Once Hydrant is completely off then you may unscrew the Meter from the Hydrant and replace Meter Capp to the Fire Hydrant.
5. If no water comes out of the Fire- Hydrant please notify the City so that maintenance of the Hydrant can be performed.
6. Return Fire Hydrant Meter to: 75 North 100 West, Midway City, Utah 84049
